DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 16-30, are drawn to a liquid concentrate preservative which comprises: a) 3-iodo-2-propynyl butylcarbamate (IPBC), b) at least one liquid carrier and c) at least one stabilizer, classified in class 514, subclass 478.
- II. Claims 31-43, are drawn to a concentrate which further comprises: a) at least one active agent, b) at least one functional additive and c) at least one auxiliary, classified in class 514, subclass 479.
- III. Claims 44-75, are drawn to a concentrate which further comprises: d) at least one active agent, e) at least one functional additive and f) absent an auxiliary, classified in class 514, subclass 479.

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are not related because the concentrate is further comprised in Invention II with more components which would render different effects and the concentrates could not be used together.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs,

modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are unrelated because Invention II is comprised with an ingredient that is not found in Invention III. Therefore the effects of the both inventions are different which would render the inventions unrelated.

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are not related because the components comprising Invention I are not found in Invention III thus the inventions are unrelated and would render different effects.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their different classification, there would be a serious burden on the examiner if restriction is not required (see MPEP § 808.02), and restriction for examination purposes as indicated is proper.

A telephone call was made to Attorney Linda Russell on September 13, 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
